MAS 90 MAS 200

Client/Server
Client/Server for SQL Server

CREDIT CARD PROCESSING FUNCTIONS

- Automatically connects to your financial network for credit card authorizations and settlements
- Integrates with Sales Order Processing, Accounts Receivable Cash Receipts, .store, and .order e-Business Manager applets
- Support for dial-up (modem) connections or secure Internet connections via TCP/IP and SSL
- Stored credit card numbers are encrypted within MAS 90 and MAS 200, and PCCharge
- Credit Verification Version 2 (CVV2) is fully supported
- Compliant with Visa and MasterCard Electronic Commerce Indicator (ECI) regulations
- Multiple address verification options available

CREDIT CARD PROCESSING

The Credit Card Processing module is powered by PCCharge Payment Server, an open architecture system designed to integrate electronic credit card transaction processing into existing Enterprise Resource Planning (ERP), distribution, and accounting systems. Whether you're a small wholesaler, a mid-sized distributor, or a large Internet service provider of e-commerce and virtual shopping services, this robust engine is the ideal solution for automated payment processing.

The PCCharge Payment Server is integrated into MAS 90 and MAS 200, allowing you to accept credit card payments through the Sales Order and Accounts Receivable modules, as well as the .store and .order e-Business Manager applets. Credit card payments are authorized and processed directly from within the MAS 90 and MAS 200 applications. All transactional information, such as authorization codes, is captured and stored within the appropriate application database for historical and reconciliation purposes.

The powerful processing features of PCCharge Payment Server with MAS 90 or MAS 200 integration give you the ability to process credit card transactions quickly, efficiently, and cost effectively, while providing superior service to your customers. And the system's fraud-prevention features protect both you and your customers from unauthorized credit card usage.

MAS 90 and MAS 200 Credit Card Processing

“We knew MAS 200 to be an excellent product. There was no question of choosing anything besides e-Business Manager and Credit Card Processing, for our entry into e-commerce.”

Lester L. Skinner, President
Skinner's Salted Nuts

FEATURES:

MAS 90 Interface Points	Sales Order order entry and invoice entry. Accounts Receivable cash receipt, e-business Manager .order and .store shopping cart.		
Credit Verification Version 2 (CVV2)	CVV2 helps verify card authenticity by validating that the purchaser does, in fact, have the card in his/her possession, which helps reduce chargebacks for e-commerce and mail order purchases.		
Address Verification Services	Address verification services add another layer of credit card authentication by comparing the purchaser's billing address with the billing address on record.		
User-Level Password Protection	The system's multiple password layers increase the security of customer card numbers and information by reducing the possibility of unauthorized access into database content and functions.		
Data File Encryption	The system's data file encryption capabilities further increase the security of customer data by enabling you to encrypt credit card account numbers in the database.
